

## CADD1114 - Introduction to Solids and Parametric Modeling

Credits:	4 (2/2/0)
Description:	This course is an introduction to solid modeling and model derived drawing layouts using the latest versions of the AutoCAD, Inventor and SolidWorks drawing software.
Prerequisites:	• CADD1102 • MCDD1102
Corequisites:	
Pre/Corequisites*:	
Competencies:	<ol> <li>Analyze static solid and parametric solid models.</li> <li>Analyze design intent for solid models.</li> <li>Apply XY drawing plane and dynamic UCS rules.</li> <li>Utilize Boolean commands and solids editing tools.</li> <li>Generate drawing layouts from solid models.</li> <li>Demonstrate file management for dwg, ipt, iam, idw, ipn, and sldprt files.</li> <li>Analyze sketch creation modes for parametric and non-parametric softwares.</li> <li>Analyze part creation modes.</li> <li>Apply feature creation and application techniques.</li> <li>Utilize browser panel functions.</li> <li>Utilize multiple design environments for part and assembly modeling.</li> <li>Utilize material applications for mass properties generation.</li> <li>Apply file associativity and bi-directional associativity to model and assembly geometry.</li> </ol>
MnTC goal areas:	None

<sup>\*</sup>Can be taking as a Prerequisite or Corequisite.
