

ELEC1110 - Electric Motors and Generators

Credits:	4 (2/2/0)
Description:	This course provides a fundamental understanding of electric motor and generator theory and basic skills. This course includes types, construction, operation, installation and maintenance of electric motors and generators.
Prerequisites:	• ELEC1102
Corequisites:	
Pre/Corequisites*:	
Competencies:	 Demonstrate safe work practices. Describe the operational theory of a direct current machine. Demonstrate the ability to properly wire a direct current machine. Analyze the characteristics of various direct current machines. Describe the theory of a rotating magnetic field in an alternating current machine. Demonstrate the ability to properly wire an alternating current machine. Describe the theory of electro-magnetic induction. Analyze the various alternating current machine characteristics. Describe the theory of single-phase alternating current machines. Demonstrate the ability to disassemble and reassemble alternating current and direct current machines. Describe the characteristics of three-phase alternating current machines. Analyze the characteristics of three-phase alternating current machines.
MnTC goal areas:	None

^{*}Can be taking as a Prerequisite or Corequisite.
