

## RADT1140 - Radiographic Imaging

Credits:	4 (2/2/0)
Description:	This course is designed to establish a knowledge base of factors that govern and influence the production and recording of radiographic images as well as provide a basis for analyzing those images. Film and electronic imaging with related accessories will be emphasized. Included are the importance of minimum imaging standards, discussion of problem-solving techniques for image evaluation and the factors that can affect image quality. Class demonstrations/labs are used to demonstrate application. Actual images will be included for analysis.
Prerequisites:	<ul style="list-style-type: none"> <li>• RADT1112</li> <li>• RADT1116</li> <li>• RADT1124</li> </ul>
Corequisites:	<ul style="list-style-type: none"> <li>• RADT1132</li> <li>• RADT1146</li> </ul>
Pre/Corequisites*:	
Competencies:	<ol style="list-style-type: none"> <li>1. Determine practical considerations in setting standards for acceptable image quality.</li> <li>2. Assess radiographic brightness on radiographic images.</li> <li>3. Assess radiographic contrast/gray scale on radiographic images.</li> <li>4. Analyze the relationship of factors that control and affect image brightness.</li> <li>5. Analyze the relationship of factors that control and affect image contrast/gray scale.</li> <li>6. Critique recorded detail/spatial resolution on various radiographic images.</li> <li>7. Analyze the relationship of factors that control and affect recorded detail/spatial resolution.</li> <li>8. Assess degrees of distortion on radiographic images.</li> <li>9. Analyze the relationship of factors that control and affect distortion.</li> <li>10. Examine uses of automatic exposure control (AEC) and how it affects the quality of images.</li> <li>11. Recognize the types, functions and applications of beam limiting devices.</li> <li>12. Recognize the composition and types of beam filtration devices as they relate to image quality and patient exposure.</li> <li>13. Define the factors that affect the production of scattered and secondary radiation.</li> <li>14. Recognize the types, functions and limitations of grids.</li> <li>15. Formulate radiographic techniques to achieve optimal radiographic images.</li> <li>16. Recognize the impact relationships of factors have on radiographic techniques selection.</li> <li>17. Examine digital imaging characteristics.</li> <li>18. Investigate key elements in digital image processing.</li> <li>19. Examine the components of digital image readers.</li> <li>20. Evaluate the qualities needed for digital image display and workflow.</li> <li>21. Discuss the primary components of digital image processing, including malfunctions that can occur.</li> <li>22. Determine the types, causes and effects of artifacts on a radiographic image.</li> <li>23. Critique radiographic images.</li> </ol>
