

BUSINESS ADMINISTRATION DIPLOMA - 33 CREDITS

About this program

Be prepared for a varied, exciting range of career options with a general Business diploma credential. Students will be provided with a fundamental knowledge of business functions, processes, and an understanding of business organizations in today's global economy. Coursework includes business concepts such as accounting, economics, management, marketing and sales. Skills related to the application of these concepts are developed through the study of computer applications, communication, critical thinking and decision-making. Through these skills, students will have a sound business education base for lifelong learning. This diploma seamlessly integrates into either of the Business AAS or Management and Marketing AAS degree programs.

Program outcomes

- 1. Communicate effectively in oral and written forms.
- 2. Practice professional and ethical behavior in internal, external and team settings.
- 3. Utilize financial concepts in analysis of business problems.
- 4. Demonstrate proficiency in computer software and hardware tools for problem-solving and decision-making.

Curriculum overview

Crds Requirement type

- 24 Required courses
 - 6 Restricted electives in courses
- 3 Restricted electives in subjects
- 33 Total

Developmental courses note: A student may be required to enroll in developmental courses in reading, writing and math. A student's scores on the Accuplacer assessment will determine enrollment in developmental courses. The purpose of developmental courses is to prepare students for the demands of a college-level curriculum. *Credits may vary*.

Course summaries

This course introduces students to the content and concepts underlying financial statements. Course content includes study of the accounting model, financial statements, merchandise accounting, internal controls and accounting for assets. The course will focus on using accounting information for decision making.

BUS1100 - Business Computers (3 credits)

Students will utilize business computer software applications including word processing, spreadsheets, databases and presentation software to solve business problems, emphasizing professional design and organization. Additional topics include basic computer hardware, computer security and ethics, privacy concerns and professional communication standards.

BUS1141 - Introduction to Business (3 credits)

This course offers a broad overview of the business world for both business and non-business majors. It is an introduction to the business environment, business ownership, management, marketing, technology and information, human resources, accounting and legal studies. This course introduces students to the concepts and knowledge of key business functions within the context of the global economy. This class will provide a foundation for other business courses and help students discover their career path while learning the fundamentals of business.

This course examines the historical and philosophical foundations of management as well as current theory and practices. Managerial decisions as a planner, organizer, motivator, controller and leader of a diverse workforce in a competitive environment are identified and evaluated. The course is a study of the basic principles of business management, including the functional, scientific, behavioral and systems approaches along with the role of projects in contemporary organizations. Current literature, concepts, models and applications may be included as well as the use of case studies.

This course examines the business function of marketing and will enhance students' decision-making skills in a global market. The course focuses on how marketers create value by satisfying customer needs and wants by analyzing which target markets the organization can best serve, and the appropriate strategies to serve these markets. This course will also discuss the implications of environmental factors (including the digital environment) that can impact the marketing strategies of a business. Topics include business and consumer markets, branding and product strategies, marketing research, digital marketing concepts, pricing, promotion and supply chain management.

DMKT2200 - Introduction to Digital Marketing (3 credits)

This course provides a broad overview of the digital marketing techniques needed for successful marketing campaigns in a digital economy. Students will gain a fundamental understanding of the digital marketing core principles needed for the 21st century consumer. Topics will include webpage design, analytics, search engine optimization (SEO), pay-per-click, email marketing, social media marketing and mobile marketing. This class prepares students for more advanced digital marketing courses.

MKTG1106 - Professional Selling (3 credits)

This course covers a fundamental sales approach that can be used as a foundation for future sales courses. The content covers steps used to plan a sales presentation and methods of determining and filling prospect needs or wants.

This course is an introduction to the field of integrated marketing communications (IMC) and its role in marketing plans. Emphasis is on the converging fields of advertising, public relations, sales promotion, personal selling and digital marketing. This course focuses on the marketing communications strategy that includes consumer insight and research, market segmentation, brand positioning, communication messages and media channels.

Prerequisites:

• BUS2206

BUS2209 - Business Research (3 credits)

Business research refers to the process of conducting research to assist with the launch or operation of a company and involves gathering data and using it to make business predictions, plans, or decisions. This Business Research course will involve analyzing market trends, collecting consumer information, and comparing competitors within the industry.

Business technology is a continuously evolving catalyst for opportunity and innovation. It is necessary to learn and share new technologies and innovations in order to maintain a competitive advantage; therefore this course requires students to do comprehensive research on a preapproved business technology or innovation topic. Students will develop and present a written report and visual presentation designed to educate their peers.

ECON2210 - Macroeconomics (3 credits)

This course provides the student with a means to study economic principles as they relate to determinants of national income, national income accounting, business cycles, unemployment, inflation and aggregate expenditures. The course also examines macroeconomic policy and provides information to gain further understanding in the areas of fiscal policy, financial markets, money and banking, monetary policy, international policy and the varying viewpoints that have evolved throughout history, including the Keynesian and Monetarist schools of thought.

Microeconomics stresses the concepts of scarcity, production possibilities, supply and demand curves, elastic and inelastic goods and services, competition, monopolies, oligopolies, poverty and income distribution in the United States. In general, microeconomics examines the functioning of individual industries and the behavior of the individual.

Meets MnTC Goal Area 1. This is an introductory writing course designed to prepare students for later college and career writing. The course focuses on developing fluency through a process approach, with particular emphasis on revision. Students will consider purpose and audience, read and discuss writing and further develop their own writing processes through successive revisions to produce polished drafts. Course work will include an introduction to argumentative writing, writing from academic sources and a short research project.
